

How factors affect person's opinion of social media

Seal Team 18

Expected outcomes:

- Age: older people favoring more, but not as much. Little parity between opinion
- Education: higher education more skeptical of social media (beliefs contributes to the proliferation of fake news)
- Social media use: more use means more value seen

Observed outcomes:

- Age: a greater percentage of young people thought it is harder to give up social media
- Education: a greater percentage (post graduate) of higher education thought it is not hard at all to give up social media
- Party: it was found to be way harder for Democrats and Independent individuals to give up social media

Technologies used:

- PostgreSQL
- Python with libraries:
 - Psycopg2: Python-PostgreSQL database adapter
 - Pandas: CSV parsing and data retrieval

Age (Young, Old)

Education (High School, College, Post Graduate)

Party (Republic, Democrat, Independent)
